

Documentation en cours de rédaction, pense-bête plus que documentation réelle

# TestLink et tests de régression

L'outil est actuellement mis en place à cette adresse: <https://www.ryxeo.com/testlink/>. Malheureusement il n'est pas encore compatible OpenID mais on y travaille ... en attendant il faudra se créer une fois de plus, des comptes utilisateurs !

Ci-dessous quelques bouts de documentation issus du manuel de l'utilisateur:

## Example of TestLink simple work-flow

1. L'Administrateur crée un projet Test "Fast Food" et deux comptes utilisateurs, Adam avec les droits de "Leader" (chef du projet) et Bela avec les droits "Senior Tester" (Testeur aguerri). 2. le chef de projet Adam ajoute les recommandations de test et crée des **Cas de test** vides. Il les organise dans deux catégories : des **Suites de test** : "Fish" and "Chips". 3. le testeur Bela décrit un scenario de test (Elle décrit le contenu de chaque Cas de test) en utilisant les recommandations, pour chaque **Suite de test**. 4. Adam crée un mot-cléf "Test de Regression" et l'attribue à 10 de ces **cas de test**. 5. Adam creates a Test Plan "Fish & Chips 1", Build "Fish 0.1" and links all Test Cases in

```
Test Suite "Fish" to this Test Plan. He assigns himself and Bela as
resources to this Test
Plan too.
```

6. Now developers produce a first build. Adam and Bela execute and record the testing

```
with the result: 5 passed, 1 failed and 4 are blocked.
```

7. Developers make a new Build "Fish 0.2" and Bela tests the failed and blocked Test

```
Cases only. This time these all blocked and failed Test Cases passed. They
retest also
all Test Cases with keywords "Regression testing" in addition.
```

8. A manager of this team would like to see the results. Administrator explains to him

```
that he can create an account himself on the login page. Manager does
it. He has see Test Results and Test Cases. He can
default "Guest" rights and can see that
everything passed in the overall report ;-) and problems in Build "Fish
0.1" in a report
for that particular Build.1
```

9. Later, developers finally add also "Chips" functionality. Adam creates a Test Plan "Fish

```
& Chips 2". He can reuse the first Test Plan as template. All "Fish" Test
```

### Cases and roles

will be automatically added. He create a new Build "Fish 1.1" and links all "Chips" Test

Cases to this Test Plan too.

10. Now testing starts as usual. 11. Later, Admin creates a new Test Project for another product "Hot Dog". But this is

another test team and a different story.
